Memo to File:

RE: Inspection of
Luki Milling
ACT/019/001
Tibbets Placer Mine
DOE/019/016
Grand County, Utah

On July 12, 1982, the above-mentioned minesite on a State lease was inspected by Thomas N. Tetting, Sandy Pruitt and Susan Linner from the Division. A gate, providing access across private land, (owned by Mr. Tibbits) to the lease along the Colorado River, was locked. A short walk in across the horsefly-infested ground revealed that no new disturbances have occurred since the previous inspection. Topsoil has been preserved and vegetation cleared off of a couple of acres. Several pieces of concentrating equipment and machinery are still onsite.

It is recommended that if the State leases are cancelled, bids be taken on the removal and the salvage value of the equipment onsite. This money may be used in regrading of the site and topsoil replacement with a small D-4 or D-5 cat.

THOMAS N. TETTING
ENGINEERING GEOLOGIST
